BNP PARIBAS FLEXI DEBT FUND (BNPPFDF)

Date of Inception	September 23, 2004			
Type of the Scheme	An open-ended Income scheme			
Investment Objective	The primary objective of the Scheme is to generate income through investments in a range of Debt and Money Market Instruments of various maturities with a view to maximising income while maintaining an optimum balance between yield, safety and liquidity. However, there can be no assurance that the investment objectives of the Scheme will be realized. The Scheme do not guarantee / indicate any returns.			
Asset Allocation Pattern	Type of Instruments	Normal Allocation (% of Net Assets)	Maximum Allocation (% of Net Assets)	Risk Profile
	Debt Instruments* with maturity of more than 1 year	70	90	Low to Medium
	Money Market Instruments** (including cash / call money & Reverse Repo) and debentures with maturity of less than 1 year	30	100	Low
	* Debt instruments may include securitised debt upto 60% of the net assets. ** Exposure to derivative Instruments not more than 50% of the net assets.			
Investment Strategies	<p>The net assets of the Scheme will be invested in debt and money market instruments. The debt portion of the portfolio will be actively managed based on the AMC's view on interest rates. The price of fixed income instruments varies with changes in interest rates. As interest rates decline, the value of fixed income securities rise and as interest rates rise, their value declines. The AMC forms views on the likely direction of interest rates and the portfolio is structured consistent with these views. This may involve active duration management to take advantage of any opportunities that may arise on account of interest rate movements. The portfolio shall be thus actively managed to capture the spread and duration gains with a strong focus on credit quality of instruments. By actively managing the portfolio, the Scheme attempts to achieve its objective through both interest yield and capital appreciation. As such, the Scheme may not invest solely based on the best available yields in the market at all points of time. The Scheme aims to provide investors with an actively managed portfolio of debt & money market instruments.</p> <p>Interest rate movements in the Indian debt markets can be volatile leading to the possibility of large price movements up or down in debt and money market securities and thereby to possibly large movements in the valuation of Portfolios. The risk of loss on account of such active and dynamic management can thus be substantial. The extent of change in price shall depend on the rating, tenor to maturity, coupon, liquidity, and the extent of fall or rise in interest rates. Individual instruments are bought and sold based on the conformity with the interest rate view and the instrument specific factors (credit risk, exposure, etc.). The Government securities carry zero credit risk, but they carry interest rate risk like any other Fixed Income Securities. The portfolio may also include other liquid assets and other short maturity assets, especially in times of rising interest rates.</p>

BNP PARIBAS GOVERNMENT SECURITIES FUND (BNPPGSF)				
Date of Inception	April 30, 2013			
Type of the Scheme	An open-ended debt scheme			
Investment Objective	The objective of the scheme is to seek to generate income and capital appreciation by investing in a portfolio of government securities of various maturities issued by Central & State Government. However, there can be no assurance that the investment objective of the scheme will be achieved. The scheme does not guarantee / indicate any returns.			
Asset Allocation Pattern	The asset allocation of the scheme under normal circumstances would be:			
	Instruments	Indicative allocations (% of total assets)		Risk Profile
		Minimum	Maximum	
	Government Securities issued by Central / State government and Treasury Bills,	65	100	Low to Medium
	Reverse repos in Government Securities and CBLO. Units of liquid funds and units of schemes predominantly investing in Government Securities	0	35	Low
The cumulative gross exposure through government securities, treasury bills and derivatives will not exceed 100% of the net assets of the scheme. The investments in units of liquid funds and units of schemes predominantly investing in Government Securities shall not exceed 5% of the net assets of the scheme. The scheme will not invest in securitised debt. Exposure to debt derivative instruments shall not be more than 30% of the net assets and shall be used only for hedging and portfolio balancing. The scheme will not invest in foreign securities including foreign securitised debt. The scheme will not invest in equity, equity related securities and foreign equity securities including ADR / GDR. The scheme will not indulge in short selling and securities lending and borrowing. It may be noted that AMC has to adhere to the asset allocation pattern indicated in the SID under normal circumstances. The modified duration of the portfolio can go up to 10. Accordingly, such higher portfolio duration can possibly lead to large price movements up or down in debt and money market securities and thereby to possibly large movements in the valuation of portfolios. The risk of loss on account of such dynamic duration management can thus be substantial.				

BNP PARIBAS GOVERNMENT SECURITIES FUND (BNPPGSF)

Investment Strategies	The scheme will invest in Government Securities issued by Central / State Government, repos / reverse repos in Central / State Government Securities as may be permitted by RBI. The fund management team will take an active view of the interest rate environment by keeping a close watch on various parameters of the Indian economy like, Government's borrowing program, level of liquidity in the banking system, inflation levels and overall macro economic growth of the country. It will take into account the various variables affecting the interest rate scenario, relative valuation of the securities, quality of instruments, maturity profile of the instruments and liquidity of the securities. As the fund is largely going to invest primarily in government securities and can employ active duration strategy the portfolio turnover can be higher relative to other debt strategies. Interest rate movements in the Indian debt markets can be volatile leading to the possibility of large price movements up or down in debt and money market securities and thereby to possibly large movements in the valuation of Portfolios. The risk of loss on account of such active and dynamic management can thus be substantial. The extent of change in price shall depend on the tenor to maturity, coupon, liquidity, and the extent of fall or rise in interest rates. The AMC will endeavour to meet the investment objective of scheme while maintaining a balance between safety, liquidity and return on investment.		
Risk Profile and Risk Control Measures of the Scheme	Mutual Fund Units involve investment risks including the possible loss of principal. BNP PARIBAS MONEY PLUS FUND (BNPPMPF)					
Date of Inception	October 21, 2005				
Type of the Scheme	An open-ended Income scheme				
Investment Objective	The primary objective of the Scheme is to provide income consistent with the prudent risk from a portfolio comprising of floating rate debt instruments, fixed rate debt instruments, money market instruments and derivatives. However, there can be no assurance that the investment objective of the Scheme will be achieved. The Scheme do not guarantee / indicate any returns.				
Asset Allocation Pattern	Type of Securities	Normal Allocation (% of Net Assets)	Minimum Allocation (% of Net Assets)	Maximum Allocation (% of Net Assets)	Risk Profile
	Floating Rate Debt Instruments (including Money Market Instruments, Debt Instruments of residual maturity less than one year as also Fixed Rate Debt Instruments* swapped for floating rate returns)*	75	65	100	Low to Medium
	Fixed Rate Debt Instruments* (including Money Market Instruments & Floating Rate Debt Instruments swapped for fixed rate returns)*	25	0	35	Low to Medium
	* Debt instruments may include securitised debt upto 60% of the net assets. * Exposure in interest rate derivative upto 50% of the net assets.				
Investment Strategies	<p>The net assets of the scheme will be predominantly invested in floating rate debt instruments, fixed rate debt instruments swapped for floating rate return, fixed rate debt securities, money market instruments and government securities in accordance with the investment pattern table.</p> <p>The objective is to generate stable returns linked to the prevalent rates of interest in the market. The yield on floating rate instruments increase with market interest rates in contrast to fixed interest securities that pay a fixed coupon irrespective of current interest rates. Thus floating rate instruments generate returns linked to market rates of interest. In the absence of floating rate debt instruments, synthetic floating rate instruments can be created with a combination of fixed rate instruments and derivatives such as Interest Rate Swaps and Forward Rate Agreements.</p> <p>Floating rate instruments are typically linked to a benchmark such as MIBOR (overnight to three months), Government Bond Yield (one year and above), etc. The scheme may invest in floating rate instruments with longer duration benchmarks (e.g. 5-year government security yield) as well as short duration benchmarks (e.g. MIBOR).</p> <p>The mix of floating and fixed rate instruments is decided based on the view on interest rates. If the fund manager believes that interest rates are headed higher, the proportion of floating rate instruments is increased. Conversely if the fund manager believes that interest rates are likely to decline, the proportion of fixed rate instruments is increased. The fund manager may use derivatives to create synthetic fixed rate instruments.</p> <p>Individual instruments are selected based on yield, credit risk of issuer, exposure to issuer, etc.</p>

Please read Scheme Information Document carefully for details on Risk Factors before investment. Scheme specific risk factors and risk control measures are summarised on page 15-17.

DEBT SCHEMES - RISK FACTORS

STANDARD RISK FACTORS:

- (i) Investments in mutual fund units involves investment risks such as market risk, credit & default risk, liquidity risk, trading volumes, settlement risk, including the possible loss of principal.
- (ii) As the price / value / interest rates of the securities including ETFs in which the scheme invests fluctuate, the value of your investment in the schemes may go up or down. The various factors which impact the value of the scheme's investments include, but are not limited to, fluctuations in the bond markets, fluctuations in interest rates, fluctuations in gold prices, prevailing political and economic environment, changes in government policy, factors specific to the issuer of the securities, tax laws, liquidity of the underlying instruments, settlement periods, trading volumes, etc.
- (iii) Past performance of the Sponsor / AMC / Mutual Fund does not guarantee future performance of the schemes.
- (iv) BNP Paribas Monthly Income Plan, BNP Paribas Flexi Debt Fund, BNP Paribas Short Term Income Fund, BNP Paribas Corporate Bond Fund, BNP Paribas Money Plus Fund, BNP Paribas Overnight Fund, BNP Paribas Government Securities Fund and BNP Paribas Medium Term Income Fund are the names of the schemes and do not in any manner indicate either the quality of the schemes or its future prospects and returns.
- (v) The sponsor / associates are not responsible or liable for any loss resulting from the operation of the schemes beyond the initial contribution of ₹ 1,00,000 (Rupees One lakh only) to the corpus of the Mutual Fund made by it towards setting up the Fund.
- (vi) The present schemes are not guaranteed or assured return schemes.

SCHEMES SPECIFIC RISK FACTORS:

(i) Market Risk:

All mutual funds and securities investments are subject to market risk and there can be no assurance / guarantee that the scheme's objectives will be achieved. The securities that the schemes invests in would be exposed to price changes on a day-to-day basis. These price changes may occur due to instrument-specific factors as well as general macroeconomic conditions.

Markets are volatile and can decline significantly in response to adverse issuer, political, regulatory, market, or economic developments. The schemes may be subject to price volatility due to factors such as interest sensitivity, market perception, and creditworthiness of issuer and market liquidity.

Different parts of the market can react differently to these developments. The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole.

(ii) Concentration Risk:

The schemes may pursue only a limited degree of diversification. It may invest a greater proportion of assets in the securities of very few issuers (within the limits permitted by regulation) or be concentrated on a few market sectors. This could have implications on the performance of the schemes. The schemes may be more sensitive to economic, business, political or other changes and this may lead to sizeable fluctuation in the Net Asset Value of the schemes.

(iii) Risks associated with schemes investing in fixed income securities:

- **Credit and Counterparty Risk:** Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e. will be unable to make timely principal and interest payments on the security or honor its contractual obligations).

Counterparty risk refers to the counterparty's inability to honor its commitments (payment, delivery, repayment, etc.) and to risk of default. This risk relates to the quality of the counterparty on which the schemes has exposures. Losses can occur in particular for the settlement / delivery of financial instruments or the conclusion of financial derivatives contracts.

The value of a fixed income security and OTC derivatives will fluctuate depending upon the changes in the perceived level of credit and counterparty risk as well as any actual event of default.

If the credit rating of an issue, issuer or counterparty is downgraded this may cause the value of the related debt securities or OTC derivatives in which the Fund has invested to fall. This Fund might hold large or all amount of its assets to securities with credit rating BBB, or lower in case of downgrading. This could present a much higher than average risk.

The severity of the risk varies depending on the quality of the securities and derivatives in the Fund. To the extent that the Fund invests in high-yield bonds, this presents a higher than average risk. There are different types of debentures available in the market. Some of them could be more risky. Lower-quality debt securities and certain types of securities involve greater risk of default or price changes due to changes in the credit quality of the issuer. They are not in the first rank of debts in case of default. The value of lower-

quality debt securities and certain types of other securities can be more volatile due to increased sensitivity to adverse issuer, political, regulatory, market or economic developments.

- **Liquidity Risk:** The liquidity of the scheme's investment is inherently restricted by trading volumes in the securities in which the schemes invests.

A lower level of liquidity affecting an individual security or derivative or an entire market at the same time, may have an adverse bearing on the value of the scheme's assets. More importantly, this may affect the scheme's ability to sell particular securities and derivatives quickly enough to minimize impact cost, as and when necessary to meet requirements of liquidity or to sell securities in response to triggers such as a specific economic / corporate event.

Trading volumes, settlement periods and transfer procedures may restrict the liquidity of a few or all of the investments and may affect the liquidity of the investments of the schemes. Transactions in ETFs can also become restricted.

The schemes may be unable to implement purchase or sale decisions when the markets turn illiquid, missing some investment opportunities or limiting ability to face redemptions. The lack of liquidity could also lead to the risk that the sale price of a security could be substantially lower than the fair value of the security.

Treatment and disposal of illiquid securities / NPAs at the time of closure of the Scheme: Such securities will be valued in good faith in accordance with the Valuation Policy. Further SEBI regulations / provisions (vide SEBI Circular - MFD/CIR/05/432/2002 dated June 20, 2002) shall apply for such securities. Accordingly any amount realized by the mutual fund after the winding up of the schemes from such NPAs and illiquid securities, if substantial and realized within two years shall be distributed back to the investors. In case the amount is not substantial or it is realized after two years, it may be transferred to the Investor Education Fund maintained as specified in SEBI circular MFD/CIR/9/120/2000 dated November 24, 2000. The decision as to the determination of substantial amount shall be taken by the trustees of mutual fund after considering the relevant factors.

- **Interest Rate Risk & Re-investment Risk:** The value of an investment may be affected by interest rate fluctuations. Interest rates may be influenced by several elements or events, such as monetary policy, the discount rate, inflation, etc.

The value of debt and fixed income securities held by the schemes generally will vary inversely with the changes in prevailing interest rates. In general, price of debt and fixed income securities go up when interest rates fall, and vice versa.

Securities of any issuer that has higher duration could be more risky in terms of price movements relative to those with lower duration. Thus any impact of interest rate changes would be higher on securities with higher duration irrespective of the status of the issuer of the security.

The investments made by the schemes are subject to reinvestment risk. This risk refers to the interest rate levels at which cash flows received from the securities in the schemes are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.

There have been times in the past, when settlements have been unable to keep pace with the volume of securities transactions, making it difficult to conduct further transactions. Delays or other problems in settlement of transactions could result in temporary periods when the assets of the schemes are not invested and no return is earned thereon.

- **Sovereign Risk:** The Central Government of India is the issuer of the local currency debt in India. The Government raises money to meet its capital and revenue expenditure by issuing debt or discounted securities. Since payment of interest and principal amount has a sovereign status implying least probability of a default, such securities are known as securities with sovereign credit. It also implies that the credit risk on such Government securities is even lower than that on non-government securities with "AAA" rating and hence yields on government securities are even lower than yields on non-government securities with "AAA" rating.
- **Risks associated with investing in liquid funds (Not applicable for BNPPONF):** To the extent of the investments in liquid mutual funds, the risks associated with investing in liquid funds like market risk, credit & default risk, liquidity risk, redemption risk including the possible loss of principal; etc. will exist.

(iv) Risk associated with investment in unrated instruments:

The schemes may invest in lower rated / unrated instruments considering the overall risk of the portfolio. This may increase the absolute level of risk of the portfolio. The credit risk & liquidity risk will be relatively higher for lower / unrated instruments as compared to the instruments that have been assigned investment grade ratings. Lower rated / unrated securities also tend to be more sensitive to economic conditions than instruments that have been assigned investment grade ratings.

DEBT SCHEMES - RISK FACTORS (Contd..)

(v) Risks associated with Securities Lending:

The risks in lending portfolios securities as with other extensions of credit consist of the failure of another party, in this case the approved intermediary, to comply with the terms of agreement entered into between the lender of securities i.e. the Schemes and the approved intermediary. Such failure to comply can result in the possible loss of rights in the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The Mutual Fund may not be able to sell such lent securities and this can lead to temporary illiquidity.

(vi) Risks associated with investing in securitised debt:

The Schemes may invest in domestic securitized debt such as asset backed securities (ABS) or mortgage backed securities (MBS). ABS means securitized debts wherein the underlying assets are receivables arising from personal loans, automobile loans, etc. MBS means securitized debts wherein the underlying assets are receivables arising from loans backed by mortgage of properties which can be residential or commercial in nature. ABS / MBS instruments reflect the undivided interest in the underlying of assets and do not represent the obligation of the issuer of ABS / MBS or the originator of the underlying receivables. The ABS / MBS holders have a limited recourse to the extent of credit enhancement provided. Securitised debt may suffer credit losses in the event of the delinquencies and credit losses in the underlying pool exceeding the credit enhancement provided. As compared to the normal corporate or sovereign debt, securitized debt is normally exposed to a higher level of reinvestment risk.

Pass through Certificate (PTC) (Pay through or other Participation Certificates) represents beneficial interest in an underlying pool of cash flows. These cash flows represent dues against single or multiple loans originated by the sellers of these loans. These loans are given by banks or financial institutions to corporates. PTCs may be backed, but not exclusively, by receivables of personal loans, car loans, two wheeler loans and other assets subject to applicable regulations.

How the risk profile of securitized debt fits into the risk appetite of the schemes

Securitised debt is a form of conversion of normally non-tradable loans to transferable securities. This is done by assigning the loans to a special purpose vehicle (a trust), which in turn issues Pass-Through-Certificates (PTCs). These PTCs are transferable securities with fixed income like characteristics. The risk of investing in securitized debt is similar to investing in debt securities. In addition, securitized debt may also carry prepayment risk and has a relatively higher liquidity risk (the same are explained in the sections that follow). However, if the fund manager evaluates that the additional risks are suitably compensated by the higher returns, he may invest in securitized debt up to the limits specified in the asset allocation table. The investment shall be in securitized instruments that are top rated (AAA/ A1+) or its equivalent, by a recognised credit rating agency for the retail pool, and for single loan securitization, limits will be assigned as per the internal credit policy of the Fund.

Policy relating to originators

The originator is the person who has initially given the loan. The originator is also usually responsible for servicing the loan (i.e. collecting the interest and principal payments). An analysis of the originator is especially important in case of retail loans as this affects the credit quality and servicing of the PTC. Originators may be: Banks, Non Banking Finance Companies, Housing Finance Companies, etc. The fund manager's evaluation will be based on the track record of the originator, delinquencies in the pool and the seasoning of the pool. Other factors that will be considered are loan type, size of the loan, average original maturity of the pool, Loan to Value Ratio, geographical distribution, liquid facility, default rate distribution, credit enhancement facility and structure of the pool.

(vii) Risk associated with each kind of originator:

- (a) **Prepayment Risk:** MBS and ABS are subject to prepayment risk. When the underlying loans are paid off by the borrower prior to their respective due dates, this is known as a prepayment. It could be triggered on account of various factors particularly in periods of declining interest rates. The possibility of such prepayment may require the schemes to reinvest the proceeds of such investments in securities offering lower yields, thereby reducing the scheme's interest income.
- (b) **Interest Rate Risk:** MBS carry interest rate risk. Home loan borrowers are provided the facility of refinancing their loans at the prevailing interest rates. A lowering of interest rates could induce a borrower to pay his loan off earlier than the scheduled tenure, whereas if the interest rates move upward, the borrower would tend to hold on to his loan for a longer period, thus increasing the maturity of the bond. The maturity of the bond could therefore shorten or lengthen, depending on the prevailing interest rates.
- (c) **Credit Risk / Default Risk:** MBS and ABS also carry credit or default risk. MBS and structures carry built-in credit enhancement in different

forms. However, any delinquencies would result in reduction of the principal amount if the amount available in the credit enhancement facility is not enough to cover the shortfall. Historically, housing loans have had lower default rates than other forms of credit.

- (d) **Price Risk / Liquidity Risk:** MBS and ABS are subject to prepayment risk. Limited volumes of trading in securitized paper in secondary market could restrict or affect the ability of the schemes to re-sell them. Thus these trades may take place at a discount, depending on the prevailing interest rates.

(viii) Risk associated with derivatives:

The schemes may use various derivative instruments and techniques, permitted within SEBI Regulations from time to time only for portfolio balancing and hedging purpose, which may increase the volatility of scheme's performance. Usage of derivatives will expose the Fund to certain risks inherent to such derivatives.

Derivative products are specialized instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will always be able to execute such strategies profitably. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. There is a possibility that a loss may be sustained by the Schemes as a result of the failure of another party (usually referred to as the "counterparty") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, interest rates and indices. Even a small price movement in the underlying instrument could have a large impact on their value. This could increase the volatility of the Scheme's performance.

In case of hedge, it is possible that derivative positions may not be perfectly in line with the underlying assets they are hedging. As a consequence the derivative cannot be expected to perfectly hedge the risk of the underlying assets. This also increases the volatility of the Scheme's performance.

Some of the risks inherent to derivatives investments include:

- (a) **Price Risk:** Despite the risk mitigation provided by various derivative instruments, there remains an inherent price risk which may result in losses exceeding actual underlying.
- (b) **Default Risk:** This is the risk that losses will be incurred due to default by counter party. This is also known as credit risk or counterparty risk.
- (c) **Basis Risk:** This risk arises when the derivative instrument used to hedge the underlying asset does not match the movement of the underlying being hedged for e.g. mismatch between the maturity date of the futures and the actual selling date of the asset.
- (d) **Limitations on upside:** Derivatives when used as hedging tool can also limit the profits from a genuine investment transaction.
- (e) **Liquidity risk:** This risk pertains to how saleable a security is in the market. All securities / instruments irrespective of whether they are equity, bonds or derivatives may be exposed to liquidity risk (when the sellers outnumber buyers) which may impact returns while exiting opportunities.

(ix) Risk factors specific to investments in foreign securities:

To the extent that the assets of the schemes may invest in foreign securities, there may be risks associated with currency movements, restrictions on repatriation and transaction procedures in overseas market, lack of complete or reliable information, market irregularities or high taxation. Further, the repatriation of capital to India may also be hampered by changes in regulations or political circumstances. Since the scheme may invest predominantly in foreign securities / markets of certain specific countries, there is a country risk which includes events such as introduction of extraordinary exchange controls, economic deterioration, bi-lateral conflict leading to immobilization of the overseas financial assets, political uncertainty, prevailing laws and policy matters including prevalent tax laws of the respective jurisdiction for execution of trades or otherwise applicable for investments in such securities / markets and the jurisdiction through which settlement of such transactions takes place. The fund shall also be exposed to settlement risk, as the country where investment is made might have different settlement periods. Market risks can be greater with respect to political instability, lack of complete or reliable information, market irregularities or high taxation. As the investment will be in securities, which are denominated in foreign currencies, fluctuation in the exchange rates of the foreign currencies may have an impact on the income and value of the fund. It may be noted that if rupee appreciates, it will lead to reduction in returns to investor. The liquidation of securities where

DEBT SCHEMES - RISK FACTORS (Contd..)

investments will be made by the schemes shall be subject to the liquidity / settlement issues of the country of investment / settlement. Non-business days in country of investment / settlement may impact the liquidity of the schemes investments. If due to difference in time zone, in case the AMC is unable to declare the NAV as per provisions stated in this SID, the acceptance of transactions shall be suspended.

(x) Risk factors specific to BNP Paribas Monthly Income Plan (risk associated with scheme investing in Equities):

The risks associated with investments in equities and similar instruments include significant fluctuations in prices. The impact of fluctuations is likely to be accentuated for short-term investments. The risk that the performance of one or more companies declines or stagnates may have a negative impact on the performance of the Scheme as a whole at any given time.

Stock markets are volatile and can decline significantly in response to political, regulatory, economic, market and stock-specific developments etc. Different parts of the market can react differently to these developments. The stock-specific volatility may also change over a period of time as the characteristic of the stock undergoes a change in terms of market-cap category.

The Scheme may hold such securities for only a very short time, which could tend to increase the costs. The Scheme may invest in growth stocks which may be more volatile than the market in general and may react differently to economic, political and market developments and to specific information about the issuer. Growth stocks traditionally show higher volatility than other stocks, especially over short periods. These stocks may also be more expensive in relation to their profits than the market in general. Consequently, growth stocks may react with more volatility to variations in profit growth.

The Fund Manager may temporarily adopt a more defensive approach if it considers that the equity market or economy is experiencing excessive volatility, a persistent general decline, or other unfavourable conditions. In such circumstances, the Scheme may be unable to achieve or pursue its investment objective.

The Scheme may invest in companies making an initial public offering. In such cases there is a risk that the price of the newly floated share is more volatile due to factors such as the absence of previous trading, unseasonal transactions and the limited number of securities available for trading.

(xi) Risk factors specific to BNP Paribas Corporate Bond Fund (BNPPCBF):

In terms of the enabling provisions of the SID of BNPPCBF, the Trustees to BNP Paribas Mutual Fund, had modified the Asset allocation and Investment pattern of the Scheme effective November 09, 2016 from earlier existing asset allocation of Debt Instruments: 15-100% and Money Market Instrument: 0-85% to **Corporate Bonds: 80-100% and Other Debt Instruments: 0-20%** (for detailed existing asset allocation and investment pattern of BNPPCBF, please refer page 7 of this KIM). Hence, for carrying out the above change in Fundamental Attribute of the Scheme, a 30 days Exit Period starting from October 10, 2016 till November 08, 2016 (both days inclusive) was made available to existing investors (i.e. whose names appeared in the register of unitholders as on close of business hours on October 04, 2016).

Accordingly, investors in BNPPCBF should also note that in case of increased exposure to Corporate Bonds (due to change in Asset Allocation and Investment Pattern of BNPPCBF), BNPPCBF may be exposed to higher degree of credit risk as compared to earlier asset allocation.

(xii) Other Risks:

- (a) Risk associated with inflation: Over time, yields of short-term investments may not keep pace with inflation, leading to a reduction in an investment's purchasing power.
- (b) Legal Risk: The schemes may be affected by the actions of government and regulatory bodies. Legislation could be imposed retrospectively or may be issued in the form of internal regulations which the public may not be aware of. Legislation (including legislation relating to tax) or regulation may be introduced which inhibits the schemes from pursuing their strategies or which renders an existing strategy less profitable than anticipated. Such actions may take any form, for example nationalization of any institution or restrictions on investment strategies in any given market sector or changing requirements and imposed without prior warning by any regulator.
- (c) Taxation Risk: The value of an investment may be affected by the application of tax laws, including withholding tax, or changes in government or economic or monetary policy from time to time. As such, no guarantee can be given that the financial objectives will actually be achieved. The tax information described in this Schemes Information Document is as available under the prevailing taxation laws and could be changed at any moment by regulation. Further, there can be no guarantee that the tax position or the proposed tax position prevailing at the time of an investment in the schemes will endure indefinitely.
- (d) Valuation Risk: This risk relates to the fact that markets, in specific situations and due to lack of volumes of transactions, do not enable an accurate assessment of the fair value of invested assets. In such cases, valuation risk

represents the possibility that, when a financial instrument matures or is sold in the market, the amount received is less than anticipated, incurring a loss to the portfolio and therefore impacting negatively the NAV of the schemes.

- (f) Operational Risk: Operational risk addresses the risk of trading and back office or administration issues that may result in a loss to the Scheme. This could be the result of oversight, ineffective securities processing procedures, computer systems problems or human error. There could also be risk associated with grouping of orders. For instance, at the time of placing the trades, the fund manager shall group orders on behalf of all schemes managed by him, provided it is unlikely to be detrimental overall for any of the schemes whose orders have been included. However, such grouping may have a detrimental effect to the scheme compared to the execution of an individual order for the scheme.
- (g) Risk factors associated with processing of transaction in case of investors investing in Mutual Fund units through Stock Exchange Mechanism: The trading mechanism introduced by the stock exchange(s) is configured to accept and process transactions for mutual fund units in both Physical and Demat Form. The allotment and / or redemption of Units through NSE and / or BSE or any other recognized stock exchange(s), on any Business Day will depend upon the modalities of processing viz. collection of application form, order processing / settlement, etc. upon which the Fund and the AMC have no control. Moreover, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by respective recognized stock exchange(s) upon which the Fund and the AMC have no control. Accordingly, there could be negative impacts to the investors such as delay or failure in allotment / redemption of Units. The Fund and the AMC are not responsible for the negative impacts.

RISK CONTROL MEASURES

Since investing requires disciplined risk management, the AMC would endeavour to incorporate adequate safeguards for controlling risks in the portfolio construction process. A credit evaluation of each investment opportunity will be undertaken to manage credit risk. The AMC will utilise ratings of recognised rating agencies as an input in the decision making process. The fund manager shall follow the asset allocation pattern in SID under normal circumstances and residual cash may be invested in the collateralised borrowing & lending obligations (CBLO) / repo market, units of liquid funds. There can however be no guarantee against liquidity issues within the schemes.

The AMC may also implement certain internal control procedures / risk & exposure limits etc. for controlling risks which may be varied from time to time.

The schemes may utilise derivative instruments for hedging & portfolio balancing purposes. All Interest Rate Swaps will be undertaken with approved counter parties under pre approved International Swaps and Derivatives Association (ISDA) agreements. The schemes may also use various derivatives and hedging products from time to time, as would be available and permitted by SEBI / RBI for the purpose of hedging and portfolio rebalancing.

The above risk control measures shall be implemented by the AMC on best effort basis however there can be no guarantee that such measures can completely mitigate the risks involved in schemes.

Sector level exposure limits:

The Mutual Fund/AMC shall ensure that total exposure of the Scheme in a particular sector (excluding investments in Bank CDs, CBLO, G-Secs, TBills, short term deposits of Scheduled Commercial Banks and AAA rated securities issued by Public Financial Institutions and Public Sector Banks) shall not exceed 25% of the net assets of the scheme;

Provided that an additional exposure to financial services sector (over and above the limit of 25%) not exceeding 15% of the net assets of the scheme shall be allowed by way of increase in exposure to Housing Finance Companies (HFCs) only;

Provided further that the additional exposure to such securities issued by HFCs are rated AA and above and these HFCs are registered with National Housing Bank (NHB) and the total investment/ exposure in HFCs shall not exceed 25% of the net assets of the Scheme.

Group level exposure limits:

The total exposure of the Scheme in a group (excluding investments in securities issued by Public Sector Units, Public Financial Institutions and Public Sector Banks) shall not exceed 20% of the net assets of the scheme. Such investment limit may be extended to 25% of the net assets of the scheme with the prior approval of the Board of Trustees.

For this purpose, a group means a group as defined under regulation 2 (mm) of SEBI (Mutual Funds) Regulations, 1996 and shall include an entity, its subsidiaries, fellow subsidiaries, its holding company and its associates.

Further, in accordance with SEBI circular SEBI/HO/IMD/DF2/CIR/P/2016/35 dated February 15, 2016, the Schemes shall comply with the aforesaid investment restrictions at sector level and group level within a period of one year from the date of issuance of SEBI circular dated February 15, 2016.

- The amount of actual commission paid by AMC/Mutual Fund to distributors (in absolute terms) during the half-year period against the concerned investor's total investments in each scheme. The term 'commission' here refers to all direct monetary payments and other payments made in the form of gifts / rewards, trips, event sponsorships etc. by AMCs/MFs to distributors. - e) In case of a specific request received from the unit holder, the AMC shall provide the account statement to the investor within 5 business days from the receipt of such request.
- f) In case the folio / account have more than one registered holder, the first named unit holder / guardian (in case of minor) shall receive the CAS.
- g) CAS shall not be issued to the investor who has not updated their Permanent Account Number (PAN) in their respective folios. **The unit holders are requested to ensure that the PAN details are updated in all their folio(s).**
- h) For this purpose, common investors across mutual funds shall be identified by their PAN.
- i) The statement of holding of the beneficiary account holder for units held in demat shall be sent by the respective DPs periodically.
- j) The word 'transaction' for the issuance of CAS shall include purchase, redemption, switch, dividend payout, dividend reinvestment, SIP, SWP, STP etc.
- k) Further, in accordance with SEBI circular CIR/MRD/DP/31/2014 dated November 12, 2014, investors are requested to note that a single consolidated view of all the investments of an investor in Mutual Funds and securities held in demat form with the depositories is being enabled.
- l) Consolidation of account statement shall be done on the basis of PAN and for PANs which are common between depositories and AMCs, the depositories shall send the CAS. In other cases, (i.e. PANs with no demat account and only MF units holding), the AMC / RTA shall continue to send the CAS to their unitholders in compliance with Regulations 36(4) of the SEBI (Mutual Funds) Regulations, 1996 and guidelines issued thereunder.
- m) Accordingly, the AMC / RTA shall provide the data with respect to common PANs to the depositories within three days from the month end. The depositories shall then consolidate and dispatch the CAS within ten days from the month end. AMC / RTA shall be responsible for the authenticity of the information provided through CAS in respect of Mutual Fund investments and timely sharing of information with depositories.
- n) The depositories and the AMC / RTA shall ensure data integrity and confidentiality in respect of shared information. The depositories shall utilize the shared data only for the purpose of providing CAS and shall not share the same with their depository participants.

No Account statements will be issued to investors opted to hold units in electronic (demat) mode, since the statement of account furnished by depository participant periodically will contain the details of transactions

- In FSTF, in case there is no minimum amount (as specified above) available in the unit holder's account for Transfer into Transferee Scheme, the transfer shall not be executed and the request of unit holder will stand withdrawn with immediate effect.

The capital appreciation, if any, will be calculated from the enrolment date of the CASTF under the folio, till the first transfer date [e.g. if the unit holder has been allotted units on the 23rd of September and the date of enrolment for monthly CASTF is the 1st of November and the unit holder has opted for 15th of every month as the transfer date, capital appreciation, if any, will be calculated from the 1st of November to the 15th of November (first transfer date). Subsequent capital appreciation, if any, will be the capital appreciation between the previous CASTF date (where transfer has been processed) and the next CASTF date].
- A request for STP will be treated as a request for redemption from the Transferor scheme and subscription into the selected Transferee scheme(s), option(s) / plan(s), at the applicable NAV, subject to load and statutory levy, if any.
- In case of minor applicant, the guardian can opt for STP only till the date of minor attaining majority.
